

Would you like to join the team in a high-tech medical company that is growing and winning new market shares?

°MEQU A/S has just had its core product, the °M Warmer System, cleared by the FDA and is entering an exciting scale-up phase. All departments - from Research & Development, through Marketing to Sales, Production, Quality Management and Customer Service - will be busy. A central function in the future development of the company will be purchasing in connection with the technical production. To manage some of the extra tasks, a new position is now being created as Purchase Manager in °MEQU's Operations. With reference to the head of Operations, it will be the Purchase Manager's job to lead and develop the purchasing function.

PURCHASE MANAGER

In a phase when the level of activity is expected to increase significantly, the new PM must ensure a continued high level of quality in procurement in a commercially profitable manner. °MEQU is looking for a person who, in his/her educational background and through previous work experience, has built up skills to be able to manage the company's purchasing activity at the crossroads between good salesmanship and technical production understanding.

THE POSITION & TASKS

We are looking for a person who has a basic technical understanding of medico products (or equivalent) and who can conduct business-oriented purchasing in the complex supplier landscape that the company works in. The production of °MEQU's °M Warmer System takes place with external partners.

As mentioned, this is a newly created and independent position with, among other things, the following areas of responsibility:

Forecasting and purchasing for the production based on order intake and sales

Stock monitoring

Suppliers contact and management (monitoring)

Deviation processing (in collaboration with QA)

Participation in the processing of customer complaints

Optimizing the administrative part of purchasing

Participation in the implementation of ERP (Continued digitization of procurement work)

After the appointment of the new Purchase Manager, there will be three people associated with °MEQU's Purchasing function.

One of these positions will be dedicated to shipments and outbound tasks.

YOUR PROFILE AND YOUR SKILLS

We imagine that there may be several different entrances to this job:

You may have a technical educational background such as production, electrical or medical engineer, followed by several years where you have used your technical knowledge in a commercial context.

Alternatively, you may have a commercially oriented educational background from CBS with a focus on Supply Chain Management and Procurement, followed by several years of professional experience in technical purchasing and supplier management.

Overall, it is important that you can include both business understanding (business skills) and the ability to understand a technically complex purchasing and production area in your list of competences.

You have experience with various IT-based purchasing solutions and are happy to undertake the task of contributing to the development of an efficient ERP solution for °MEQU.

PERSONAL CHARACTERISTICS

As a person, you are motivated by working in a corporate environment in which *development* is a key word.

You like to be busy, and you manage to prioritize between the many potential tasks, so that you and your colleagues do not lose focus and momentum.

It is important for you to be able to drive tasks to completion. You are structured, well-organized and detail-oriented, just as you find it natural to seek out and take responsibility for diverse tasks and processes with a deadline.

Your working style is characterized by a dialogue-seeking approach, as part of which you take pride in solving procurement tasks in close collaboration across the organization and with external partners.

°MEQU OFFERS

A newly created job with a very central position in the company. A job where you will work closely with a wide range of your colleagues across the entire organization.

°MEQU has a flexible organization of working hours and place. However, it is important in this job that you are visible and accessible to both colleagues, suppliers, and production sites.

°MEQU is characterized by a modern, professional, and value-based work culture, where people stand together to market and sell a product that is of great benefit to many people. The company is now taking a leap forward after clearance in the USA, and it can be predicted that you as a new employee will have very good professional and personal development opportunities.

You are offered a competitive salary with a pension scheme and up-to-date benefits.

APPLICATION

We collaborate with an external recruitment specialist in this process. Your motivated application with CV in English must therefore be sent to Nils Munck: nm@nilsmunck-consult.com.

Please apply as soon as possible. We hold ongoing interviews with applicants and anticipate working quickly through the months of August and September.

ADDITIONAL INFORMATION

If you want to know more about the employment process and the position, you are welcome to contact Nils Munck on 53573274.

ABOUT °MEQU

°MEQU A/S is a high-tech company that develops, manufactures and sells medical equipment for heating blood during transfusion.

The company was founded by the current CEO and has been around for 12 years. °MEQU is situated at Symbion, Fruebjergvej 3, 2100 KBH Østerbro, and currently has 12 employees. The °MEQU °M Warmer System has just been cleared by the FDA for the American market, and the company is therefore facing a particularly exciting development phase. Production takes place with external partners.
